Automated Video Cutting

> 💡 Goal of this task is to create a notebook or small program which can cut a longer video into a shorter one, based on some given tags

The Inputs should be:

- a video like https://www.youtube.com/watch?v=sdukgmUn3wo
- tags like: cnc, soldering, …

The tool should then detect scenes in the given video, which include video footage which fits the given tags.

Out of this a list of scenes should be extracted, in order to later cut a shorter video (~30 seconds) only including relevant parts.
